

AWD[®] AWD/Scan[®]

DST's Automated Work Distributor™ (AWD[®]) is a comprehensive business process management (BPM) solution. To support AWD's multi-channel capture capabilities, AWD/Scan[®] provides high-volume scan, capture, and archival functions.

Rapid, Flexible Processing Saves Time and Money

AWD/Scan enables organizations to process images at the scanner's maximum speed, reducing the number of associates and hardware required for a scanning environment.

AWD/Scan fully supports many scanner models—from desktop to high-speed—and its unique features provide flexibility and control over the scanning workflow. AWD/Scan also supports color scanners and allows associates to view scanned color documents as part of the scan review process.

In addition, AWD/Scan can be integrated with other AWD products to provide the ultimate enterprise work management solution. For example, AWD/Scan used with AWD/ICR[®] provides an intelligent character recognition system capable of reading machine-type-set and handwritten characters from documents.

AWD/Scan Adapts to Scanning Environment

AWD/Scan can adapt to various scanning environments, such as batch and interactive scanning. This feature enables the user to select the method that best fits scanning requirements at a specific time.

Batch scanning enables the user to group related documents and scan those documents in one session. In contrast, interactive scanning enables the user to scan a single document—useful for work that does not

fit into batch scanning criteria or for documents that need to be rescanned.

Because AWD/Scan is able to read front and back (duplex scanning only) page bar codes, the user can batch process documents and have them automatically indexed at the same time. This “dynamic indexing” scanning feature saves valuable processing time. AWD/Scan also supports the PDF417 two-dimensional font for creating a grouped bar code containing multiple data fields.

For added flexibility, AWD/Scan can perform the indexing function interactively either before or after scanning.

Also, quality control with AWD/Scan is easy and convenient. All scanned images are temporarily stored on the local AWD/Scan station until archiving is complete. This feature enables the user to change indexing information or delete sources before committing them to their final destination.

Make our Technology Your Advantage
