

AWD[®]

AWD/ICR[®]

High-Speed Recognition

AWD/ICR[®] optimizes the speed and accuracy of forms processing by capturing machine- and hand-print characters from scanned images of forms.

Integrated with third-party form processing software, AWD/ICR provides the following benefits:

- Improved processing quality.
- Increased productivity.
- Decreased processor training time.
- Simple task automation.
- Recognition of handprint, machine print, marks, and barcodes.

In a standard AWD environment, a processor must first review sources, and then manually update AWD work objects and LOB systems with the source data. But AWD/ICR electronically reads predetermined source fields and transfers this data to work objects and external systems with little or no user intervention. Each field can be sent through a rules-based validation system. AWD/ICR includes online, graphical windows-based user software for processing corrections, validations, and high-speed data keying.

Many types of forms can be sent through AWD/ICR, including:

- New account applications
- Address changes
- IRA distribution forms
- Tender forms
- Stock split and exchange forms
- Direct deposit authorization forms
- Dividend reinvestment and stock purchase forms
- State insurance forms
- Insurance surveys

AWD/ICR is easily configurable to meet the specific needs of your organization.
